Abstract	1
Introduction	2
Purpose and Scope	3
Description of study area	3
Data-collection network	7
Branch-network flow model	10
Atlantic Intracoastal Waterway flow model	11
Simulation of water discharge	13
Sensitivity of the model	23
Low-flow frequency	26
Location of saltwater-freshwater interface	29
Water supply potential	39
Summary	43
Selected references	44
Glossary	45

ILLUSTRATIONS

	Page
Figure 1. Map showing location of study area and streamflow gaging stations on major tributaries	4
2. Map showing generalized direction (indicated by large arrows) of daily mean discharge in the flow system near the coast	5
3. Generalized diagram of vertical stratification between saltwater and freshwater	6
4. Map showing location of continuous stage and specific conductance recorders in the Atlantic Intracoastal Waterway	8
5. Diagram showing the configuration of the BRANCH model for the Atlantic Intracoastal Waterway near Myrtle Beach, South Carolina	12
6-22 Graphs showing:	
6. Comparison of measured and simulated discharges in the Atlantic Intracoastal Waterway near Briarcliffe Acres (02110755), March 19, 1982.....	14
7. Comparison of measured and simulated discharges in the Atlantic Intracoastal Waterway near Briarcliffe Acres (02110755), October 16, 1981.....	14
8. Effect of datum errors on simulated daily mean discharge at Briarcliffe Acres gage (02110755)	24
9. Effect of wind speed and direction on simulated discharge at Briarcliffe Acres gage (02110755)	25
10. Relation of 7-day average discharges of the Atlantic Intracoastal Waterway to 7-day averages of summed tributary discharges lagged four days, for 1982-85 water years	27
